

We Want to Hear From You

- **What is your vision for California agriculture by 2030?**

**Pesticide and herbicide free produce, dairy ,meats and poultry. (Dairy and meats grass fed).
Healthier foods.**

- **What will be the biggest challenge in achieving that vision?**

**Big Ag changing, eliminating the added toxins put on the soil, in the animals and on the
processed foods.**

- **In 2030, how has the public perception of agriculture changed?**

**I really don't see Big Ag nor the government changing, so I foresee under-ground, black market-
foods. Raw milk is an example in many states.**

- **What is a "must have" in an Ag Vision for California?**

**See the above. I have to produce most of my own foods. The chemicals in the processed foods
make me ill. I am unable to eat it. When I retire, I'll leave California and make my home in another
state.**
